

SYMSITES

Industrial and Urban Symbiosis

A must for a sustainable and circular economy

SYMSITES is a 4-year Horizon Europe project aiming to **develop new technologies and solutions based on the Industrial and Urban Symbiosis (I-US) concept**: local and regional collaborations among diverse actors (citizens, municipalities, and enterprises) and sectors will improve the sustainability of the industrial and societal resources use starting from wastewater and waste materials.

**30 PARTNERS
9 COUNTRIES**

**DURATION
48 MONTHS
06/22 - 05/26**

**TOTAL BUDGET
€ 12.404.455**

4 EcoSites

SPAIN
cosmetics & textile industries

DENMARK
breweries & local agriculture

AUSTRIA
meat industries

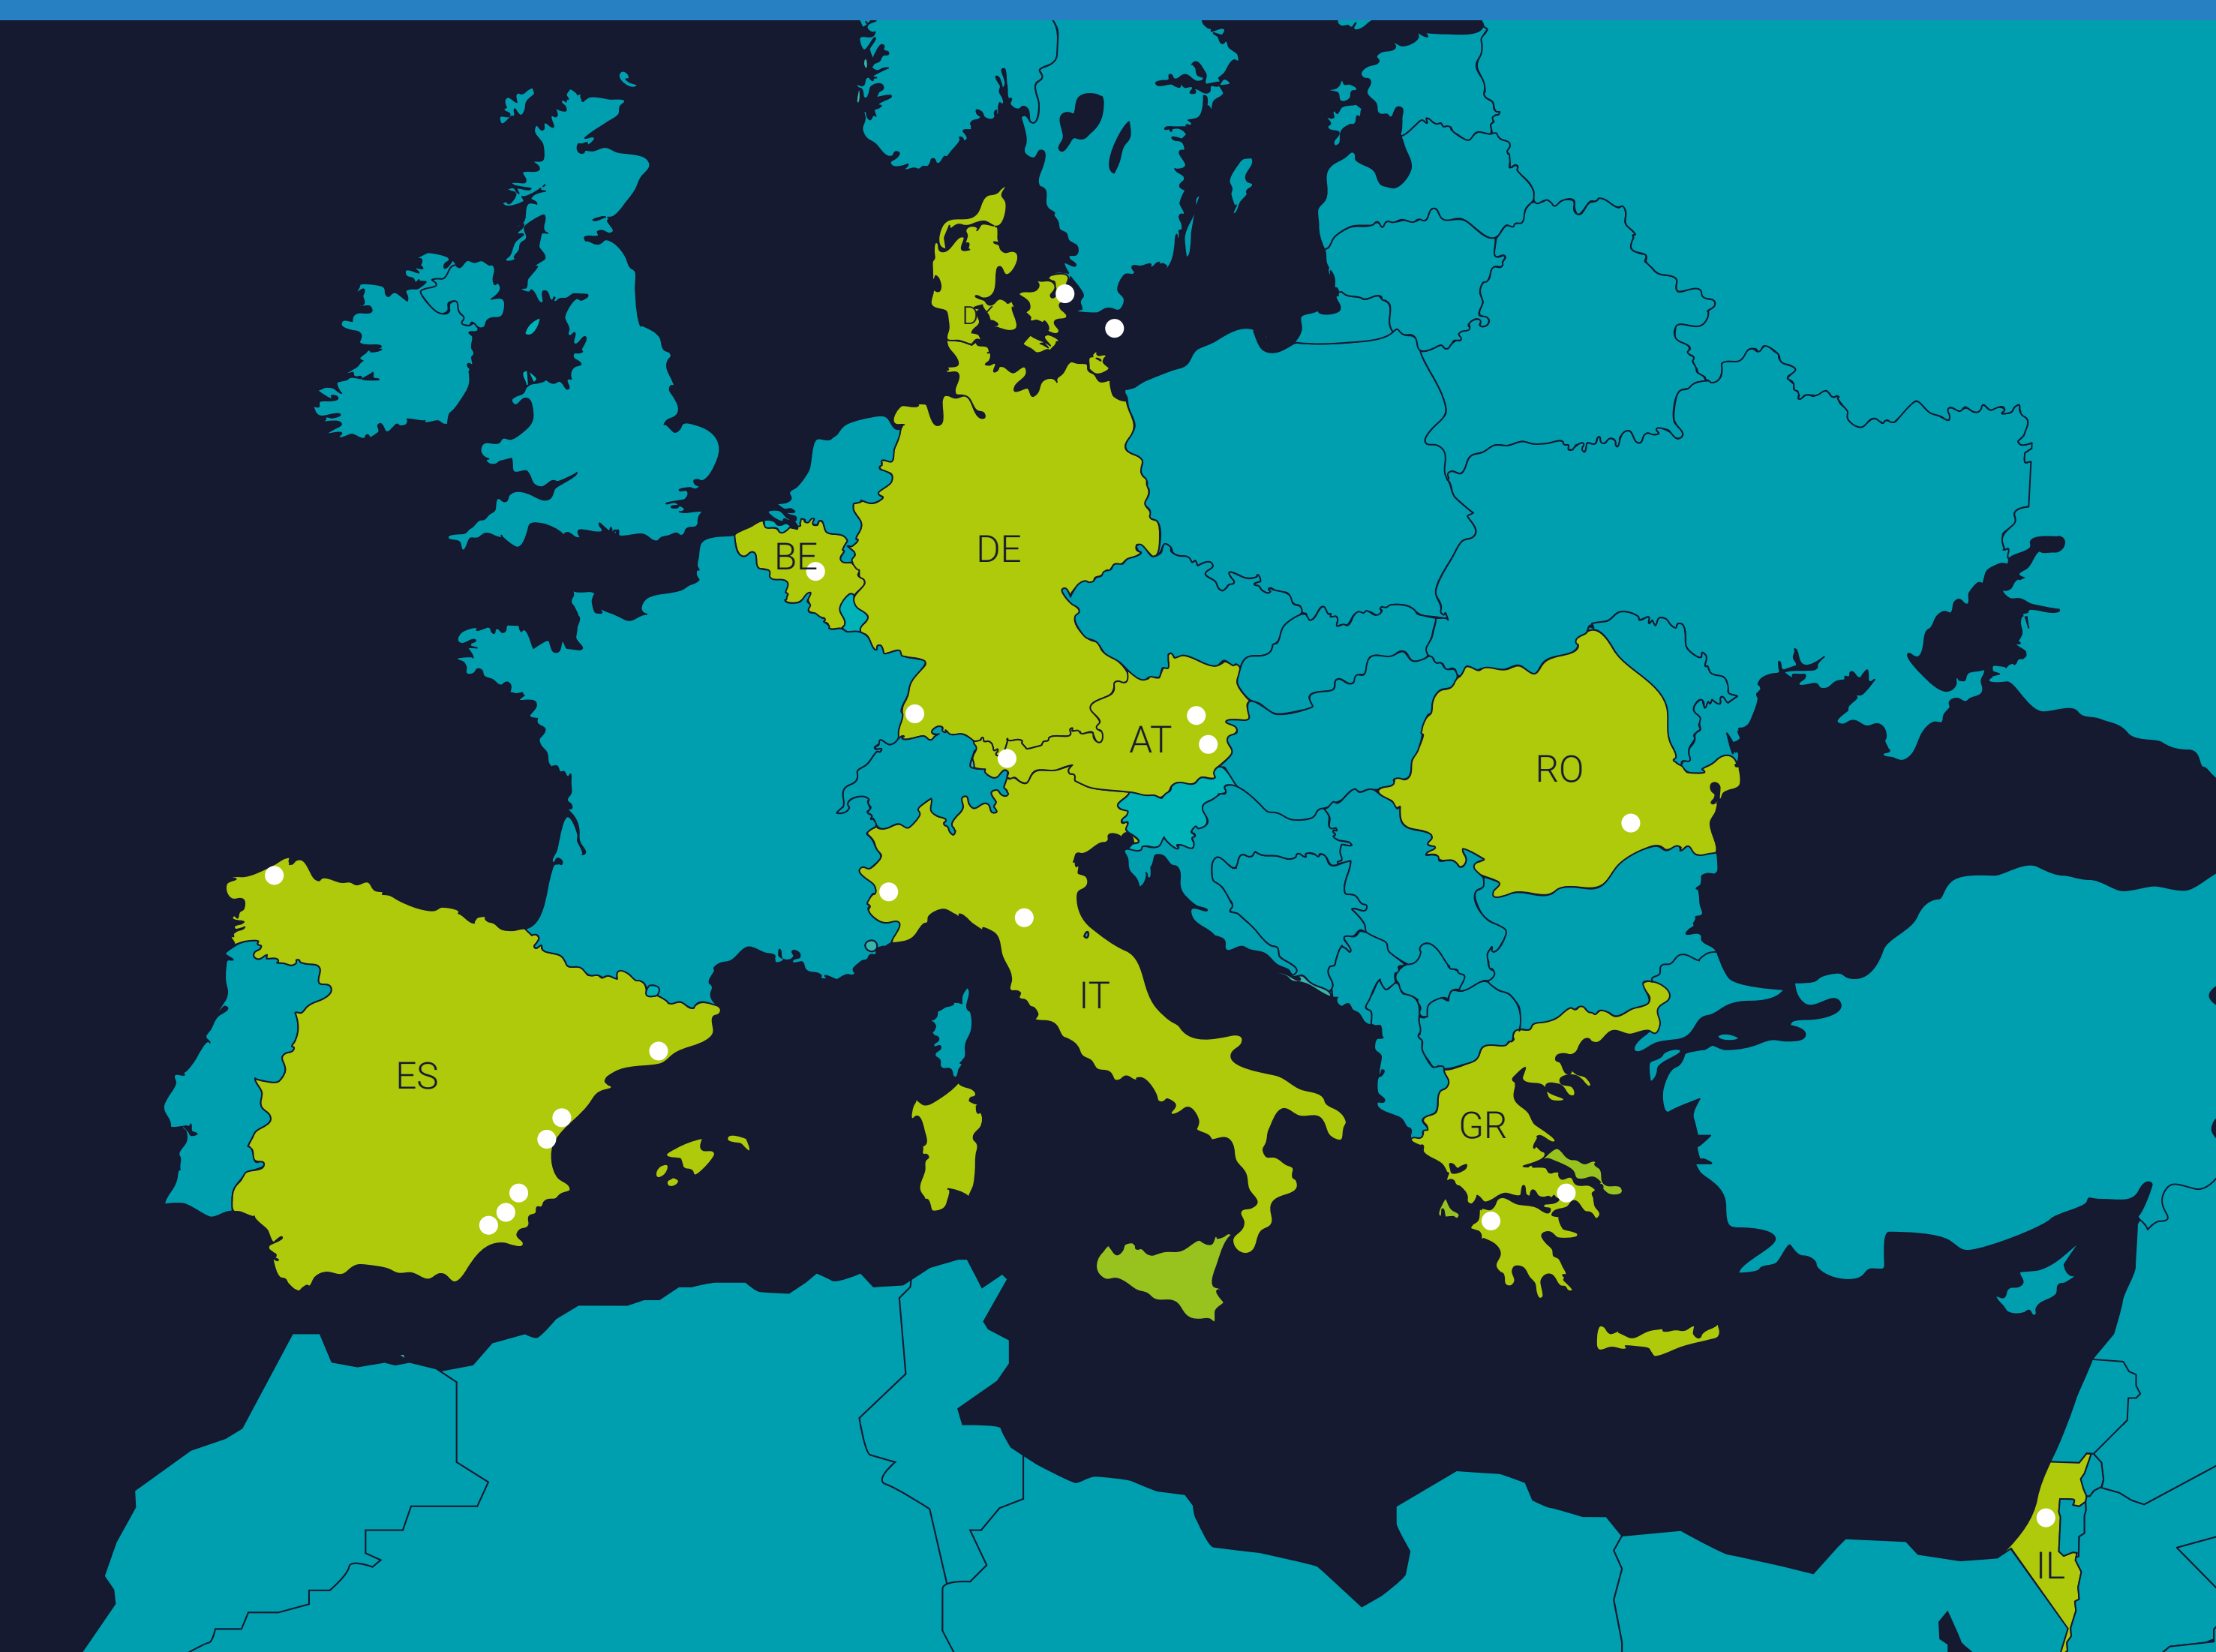

GREECE
olive oil industry

What is an Ecosite?
[READ MORE](#)

Expected impact

- Reduce by 50% (in weight or volume) industrial waste generation
- Defined actions to overcome non-technological barriers for exploitation of cross-company symbiosis
- Near-zero greenhouse gas emissions, near-zero water discharge, and 70% valorization of the energy
- After the project, is estimated to have an increasing number of employees: 100 direct employees and 400 indirect employees
- Developed facilitation services for supporting the implementation of symbiotic processes directed to local authorities, relevant businesses, private/industry actors, especially SMEs
